

Rails 3.1

Pamokos, išmoktos migruojant

Priežastys

- Rails 3.1 yra stable
- Ateities planuose mažai laiko
- Javascript ir Stylesheet suorganizavimas
- Hipsterism! FTW!

Žingsniai

1. Update inkime GEMsus
2. ...
3. Works! NOOOT!

stack level too deep

gems? or plugins?

Who's fault??!

environment.rb:

include Utils

include UiUtils

include KeywordReplacer

routes.rb:

include Utils

module Utils

include Rails.application.routes.url_helpers

...

module UiUtils

....

ASSETS!?

- app/assets
- app/assets/javascripts
- app/assets/stylesheets

```
config.assets.enabled = true
config.assets.compress = true
config.assets.js_compressor = :uglifier
  # gem 'uglifier' & 'therubyracer'
config.assets.prefix = "/assets"
```

development.rb

Do not compress assets

config.assets.compress = false

Expands the lines which load the assets

config.assets.debug = true

production.rb

config.serve_static_assets = true

config.assets.compress = true

config.assets.compile = true

config.assets.digest = false # true

config.assets.precompile += ["*.js", "*.css"]

DIGEST?

- application-xxxxxx.js
- deploy without downtime

Notes on assets

Kešavimas:

- Production - 3001 port
- Development - 3000 port

Struktūra app/assets/javascripts:

lib/

app/

... (files with //= require lib/ or //= require app/)

k**va - top level

Useriai prijungiami
prie kitų user'ių

rack-cache

```
class PrettyCoolController
  caches_page :cool_action

  def cool_action
    expires_in 2.hour, :public => true

    ...
  end
end
...
```

<https://github.com/rails/rails/issues/476>

Models

- app/models/admin/...

class AdminAlert or class Admin::AdminAlert

Conclusion

- Assetai suorganizuoti; ar bent jau yra kaip juos organizuoti.
- Assetai užima mažiau
- Viskas veikia greičiau
- Hipsterism WIN!
